PRIME PLUS

Drives heat up and energy cost down

REVOLUTIONARY
ENERGY SAVING
WATER HEATING SYSTEMS

SPAS | HOT TUBS | SWIMSPAS | SWIMMING POOLS

ENERGY SAVING TECHNOLOGY

Climacube design, develop and produce ground breaking, energy efficient Hot Tub, Spa, Swimspa and Swimming Pool Water Heating Systems. Utilising patented thermodynamic technology that dramatically reduces the power consumption required to heat or maintain heat over conventional heating systems. Saving up to 60% time on heat up and up to 80% less power. Saving customers time, energy and money, while significantly reducing their carbon footprint.

With hundreds of installations across the UK, our landmark Climacube products have been recognised by the industry, winning the converted UK Pool & Spa Awards 'Spa Product of the Year 2019' and 'Energy Efficient Product of the Year 2019'. Providing a ringing endorsement of our revolutionary Climacube water heating technology and its money saving benefits.

RELIABLE THERMODYNAMIC WATER HEATING SOLUTIONS

The Climacube range has undergone rigorous evaluation throughout the design and production process at our purpose built factory-testing facility. Which can accurately produce a working environment temperature range of 40 degrees to -25 degrees if required. By replicating accurate working conditions ensures our brands are market leaders. Solving any performance or reliability issues for our customers on test rather than in situ and allows Climacube to guarantee quality with our industry leading warranties.

We believe it is this attention to detail, investment in the highest quality testing facility and production control procedures, ensures our groundbreaking and innovative products are of the utmost quality and reliability.

REDUCES YOUR CARBON FOOTPRINT

By dramatically reducing the energy required to heat your Hot Tub, Spa, Swimspa or Swimming Pool will result in much lower power usage on heat up and continuous use, dramatically reducing the impact on the environment. The Climacube has full CE European Accreditation and A+ EPC Certification

SAVE ENERGY TIME AND MONEY

ENERGY SAVING, HOT TUB, SPA AND SWIMSPA WATER HEATING FOR LARGER WATER VOLUMES

CLIMACUBE PRIME PLUS

The Climacube Prime Plus Water Heating System has been designed for those customers with larger volumes of water to heat. The Climacube Prime Plus offers the very latest energy saving heat technology, dramatically reducing running costs, increasing customer usage, reducing your carbon footprint and enabling customers to enjoy the Hot Tub, Spa, or Swimspa all year round, at the desired temperature without the concern of cost. Unlike conventional heat systems, Climacube system will heat hot tub or spa in around 4-5 hours from cold with a consumption of only 1KW per/hour with a COP of over 3.5 in minus temperatures – meaning a dramatic reduction in your annual energy costs.

Available as a stand-alone unit the Climacube can be retro- fitted or included as a pre-installed feature if required. Based on a thermo-dynamic patented technology, working off a 13 amp supply the revolutionary Climacube is supplied with all the appropriate European wide accreditations and is supplied, serviced and available throughout Europe.
